

Summary of the presentation

Alcatel-Lucent Enterprise new data center switching solution combines its market leading OmniSwitch 10K with its new OmniSwitch 6900. This solution provides a high performance, highly resilient, low latency and low power switching fabric for the data center with automated controls for high quality application delivery and virtual machine management. A services-based architecture enables seamless private and public cloud application delivery. Integration with Alcatel-Lucent's Data Center Connect enables interconnection over private WAN.

CV

Jaap de Goede is senior product marketing manager for network infrastructure products with Alcatel-Lucent Enterprise. He has 25 years of experience in IT, of which 20 years in enterprise network infrastructure design, consultancy and lately marketing. His experience with networking infrastructure started with Token Ring and SNA in the late '80s. This gradually evolved along with the market evolutions via ATM to Ethernet, WiFi and TCP/IP.
