

Summary of the presentation

Because of the increasing density of the applications in datacenters, there is also an increasing need of cooling of these applications. The challenge is to realize this in the most efficient way to guarantee continuity of the processes but also to minimize the energy consumption and therefore to reduce the total cost of ownership.

Curriculum Vitae of the speaker

Koen Goossens is Account Manager at rittal nv/sa in Lokeren. He is responsible for the clients portfolio as well as the expansion of it through specific prospecting in the Provinces of Limburg, Antwerp, East-Flanders and West-Flanders. Koen is specialized in helping end clients and installers to find the most complete solution for building new serverrooms and converting their present serverrooms.
