2. Why Value-Based Procurement now?

The infographic “Why Value-Based Procurement now?” visually represents why Value-Based Procurement (VBP) can facilitate the move towards Value-Based Healthcare and why it is relevant for all healthcare stakeholders.

It includes:

- The motivations and incentives behind VBP
- VBP definitions and benefits
- Guidance on how/where to get started and/or accelerate VBP

3. Procurement: the unexpected driver of value-based health care

The global healthcare industry faces two critical challenges: large variation in patient outcomes and continually increasing costs. Value-based health care can address both, but hospitals and health systems must factor value into their procurement decisions for medical products.

4. MEAT Value-Based Procurement enabling value-based healthcare in Europe

Procurement: a key pillar of value-based healthcare Value-based healthcare is gaining traction across Europe as the way forward to build more efficient and sustainable health systems. This approach takes into account the wider patient and societal outcomes together with the life-cycle cost of healthcare delivery and services. Doing so can provide more economically advantageous solutions and increased quality and value of care for patients, healthcare professionals and health systems as a whole.

5. Most Economically Advantageous Tender Value-Based Procurement (MEAT VBP): initiative overview (January 2018)

The concept of value-based healthcare is gaining traction across Europe as the way forward to build more efficient and sustainable health systems. This approach takes into account the wider patient and societal outcomes together with the life-cycle cost of healthcare delivery and services. Doing so can provide more economically advantageous solutions and increase quality and value of care for patients, healthcare professionals and health systems as a whole.
